

Why Tax Credit Management

Did you know that one in five hourly workers could qualify for a tax credit worth up to \$9,000!

Thousands of federal and state credits worth billions of dollars go unclaimed every year by U.S. businesses.

Consider this; If your company processes 100 W-2's in a year, on average, there could be 20 employees that qualify for a tax credit. At an average credit value of \$1,300 per person, your company could receive \$26,000 total tax credit for the year.

Reduction of Federal and State income taxes is accomplished by pre-screening applicants or new hires to determine if they fall within targeted groups.

Those who pay Federal income taxes may participate in the programs. Businesses are encouraged to apply for these programs to help offset liabilities and promote growth. These programs serve as an extension of endorsing your commitment to your community. In addition the law actually allows you to give hiring preference to job candidates that qualify for an Employer Tax Credit!

Most tax credits go unclaimed because the tax credit category is a narrow and multi-faceted part of tax laws; therefore, the majority of businesses and CPA's are unable to stay current with these opportunities. The tracking and recovery process is too complex to administer in-house because of timelines, forms and strict guidelines and most businesses and CPA's are not operationally equipped to track and administer the credits.

In general, processing employer tax credits internally is financially unfeasible because the process is too cumbersome if it is not being driven technologically and that is what we can do for you!

We offer you a very cost effective tax credit management solution that will automatically examine and identify which of your job applicants qualify for tax credits and will perform the tax credit recovery process for you.
